SUMMARY

AI & ML undergraduate with practical experience in building **Machine Learning, Computer Vision, IoT, and Intelligent Automation Systems**. Skilled in **Python, Java, JavaScript, Data Analysis, and Real-Time Application Development** with strong problem-solving abilities and interest in innovative product development.

PROJECTS

Artificial Intelligence Companion for Visually Impaired

May 2025 – Oct 2025

- Developed AI-powered smart glasses for **Object Detection, OCR Text Reading, Face Recognition, and Voice Assistance** using **Python, OpenCV, OCR modules, Text-to-Speech APIs, and Raspberry Pi**.
- Implemented real-time image processing for obstacle detection, currency recognition, text extraction, and navigation support.
- Improved accessibility by converting surroundings and printed text into instant voice feedback for visually impaired users.

Manufacturing Output Prediction System

Aug 2025 – Sep 2025

- Built a **Regression-based Machine Learning model** using **Python, Pandas, NumPy, Scikit-learn, and Matplotlib** to predict machine production output based on historical manufacturing data.
- Performed data preprocessing, feature engineering, outlier removal, model training, and performance evaluation.
- Generated visual dashboards and reports to help optimize production efficiency and support decision-making.

Internet of Robotic Things

Jun 2025 – Nov 2025

- Designed an IoT-enabled robotic system for **Remote Monitoring, Motion Control, Surveillance, and Live Streaming** using **Raspberry Pi, Node-RED, Firebase, and Sensors**.
- Integrated browser-based control panel for remote operations with real-time communication between hardware and cloud services.
- Enabled automation workflows for movement control, camera streaming, and sensor-based responses.

Drowsiness Detection System

Dec 2024 – Apr 2025

- Developed a driver safety solution using **Arduino, IR Sensors, Buzzer Alerts, and C/C++** to detect eye movement patterns and fatigue symptoms.
- Triggered **Real-Time Alerts** whenever prolonged eye closure or drowsiness was detected.
- Improved road safety through continuous monitoring and fast response warning mechanisms.

SKILLS AND CERTIFICATIONS

Languages — Python, Java, JavaScript, SQL, HTML/CSS, C/C++

Libraries — NumPy, Pandas, Matplotlib, Scikit-learn, OpenCV

Tools — Git/GitHub, VS Code, Jupyter Notebook, Firebase, Node-RED

Concepts — Machine Learning, Computer Vision, Data Structures, OOP, IoT, Automation

Certifications — AI/ML Foundations, IoT, Data Science, Machine Learning using Python

EDUCATION

Don Bosco Institute of Technology, Bengaluru

Jul 2022 – Jun 2026

Bachelor of Engineering in Computer Science and Engineering (AI & ML)

CGPA: 8.31

SBGNS Rural PU College, Chikkaballapur

Sep 2020 – Apr 2022

Pre-University College
